AMENDMENTS TO THE CLAIMS

This listing of claims will replace all prior versions, and listings, of claims in the application:

Listing of claims:

1. (Currently amended) A thermoplastic polyester-based flame-retardant resin composition comprising consisting essentially of (A) 100 parts by weight of a thermoplastic polyester resin polybutylene terephthalate, (B) 3 to 50 parts by weight of a bromine-containing aromatic compound, (C) 2 to 30 parts by weight of an antimony oxide compound, (D) 0.1 to 3 parts by weight of polytetrafluoroethylene having fibril-forming abilities, and (E) 0.7 to 8 parts by weight of a lamellar filler.
2. (Original) A flame-retardant resin composition according to claim 1, further comprising (F) 9 to 100 parts by weight of a glass reinforcement.
3. (Original) A flame-retardant resin composition according to claim 1, wherein the lamellar filler (E) is a silicate compound.
4. (Cancelled)
5. (Currently amended) A flame-retardant resin composition according to claim 1, wherein the lamellar filler (E) is one or more of the silicate compounds selected from the group consisting of talc, mica, clay and kaolin.
6. (Currently amended) A flame-retardant resin composition according to claim 1, wherein the bromine-containing aromatic compound (B) is one or more of the

compounds selected from the group consisting of tetrabromobisphenol A type epoxy oligomers or polymers, tetrabromobisphenol A type polycarbonate oligomers or polymers, pentabromobenzyl polyacrylates and polystyrene bromide.

7. (Currently amended) Molded products having at least one thin-wall portion with a thickness of less than not more than 0.8 mm, obtained by molding the thermoplastic polyester-based resin composition as defined in claim 1.

8. (Original) The molded products as defined in claim 7, which are relay parts.

9. (Original) A flame-retardant resin composition according to claim 2, wherein the lamellar filler (E) is a silicate compound.

10. (Cancelled)

11. (Currently amended) A flame-retardant resin composition according to claim 2, wherein the lamellar filler (E) is one or more of the silicate compounds selected from the group consisting of talc, mica, clay and kaolin.

12. (Currently amended) A flame-retardant resin composition according to claim 2, wherein the bromine-containing aromatic compound (B) is one or more of the compounds selected from the group consisting of tetrabromobisphenol A type epoxy oligomers or polymers, tetrabromobisphenol A type polycarbonate oligomers or polymers, pentabromobenzyl polyacrylates and polystyrene bromide.

13. (Currently amended) Molded products having at least one thin-wall portion with a thickness of not more than ~~less than~~ 0.8 mm, obtained by molding the thermoplastic polyester-based resin composition as defined in claim 2.

7

Docket No.: 60810 (71360)

14. (Original) The molded products as defined in claim 13, which are relay parts.
15. (New) Molded products according to claim 13, having at least one thin-wall portion with a thickness of not more than 0.4 mm.
16. (New) A flame-retardant resin composition according to claim 1, including at least one material selected from an elastomer, a stabilizer, an antioxidant, a weathering agent, a lubricant, a releasing agent, a nucleating agent, a plasticizer, an antistatic agent, a colorant, a polycarbonate, polystyrene, polymethyl methacrylate, an acrylonitrile-styrene resin, and an acrylonitrile-butadiene-styrene resin.
17. (New) Molded products according to claim 7, having at least one thin-wall portion with a thickness of not more than 0.4 mm.
